

Enhance your infection control regiment while your caregivers are concentrating on their patients.

Our UV-Clean retrofit bracket (UVC-RF) is designed to easily attach to most existing Proximity wall cabinets. The UVC-RF device comes pre-assembled with a simple industrial two-sided tape, to adhere to any shelf surface. Regular cleaning cycles with low doses of UV-C light are harmful to pathogens, yet safe for you. Giving you the peace of mind that in addition to an intense UV light disinfecting room robot, you can protect your employees throughout their day – every day. Although hand washing policies should be your first layer of defense, the UVC-RF will provide an additional level of disinfection to eliminate the ability for germs to reproduce and infect your patients and employees.

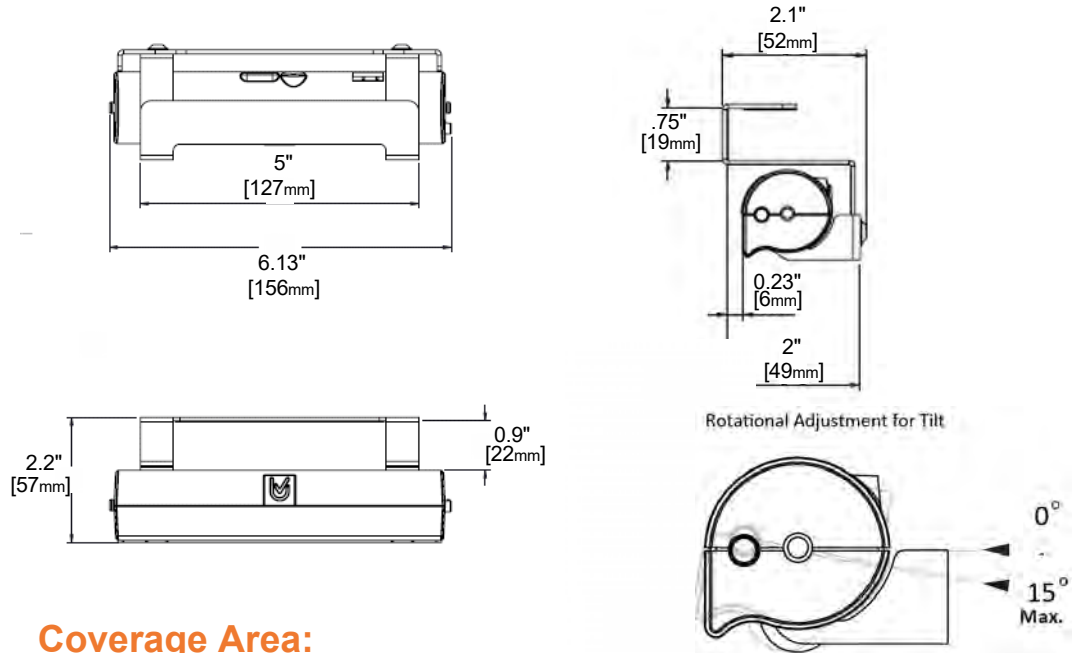

HOW DOES IT WORK?

UV-C light is dispensed at timed intervals with low levels up to 24" away, to break down the DNA of organisms on high-touch surfaces. UVC-RF is equipped with automated cleaning cycles, and a motion sensor. As soon as motion is detected, it will discontinue its cycle and then resume cleaning immediately after no motion is detected.

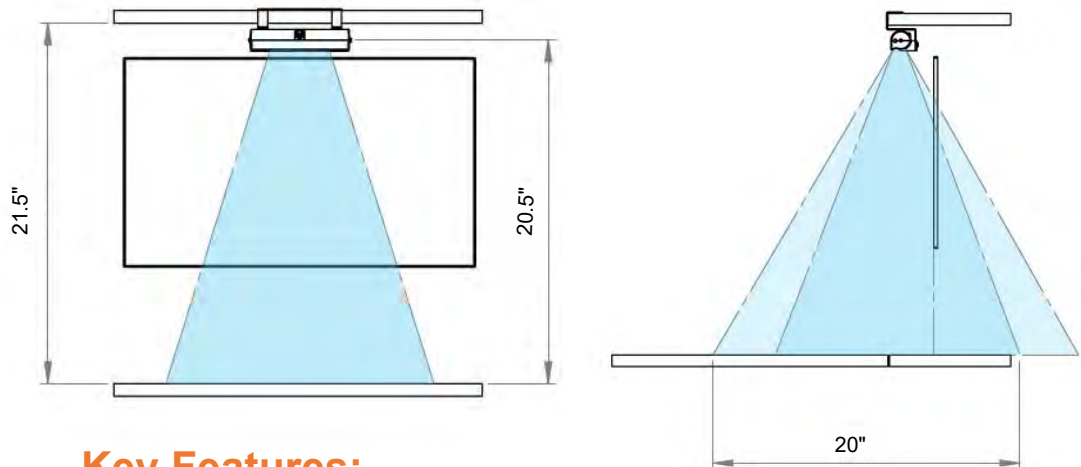

HOW DO I KNOW IF ITS CLEANING CONSISTANTLY?

Every unit includes a USB cable that will allow you to connect the UVC-RF device to a PC for easy download of its audit trail. All audit trails reside locally on each device, eliminating any network security issues. Simply download the cycle reports from each individual device to confirm cleaning.

Coverage Area:

Key Features:

- Attach to any existing wall mounted computer workstation.
- Protects your employees throughout their day - every day.
- Optimizing day to day work flow with an automatic means of self disinfection.
- Low cost of ownership to implement device that wont impact efficiency.
- A solution that will protect staff as well as patients.
- No manual check sheets to track cleaning.

MATERIAL

100% recyclable UV stable plastic

15-gauge powder-coated steel

UV-C bulb and 5.5 mm power port connection to USB r supplied power adapter

Low energy LED task light

RESULTS

Breaks down microorganisms up to 24" away

Kills 99.9% of pathogens on high-touch surfaces
